PROFESSIONAL SUMMARY

I thrive where deep tech meets bold ideas, think blockchain, AI, automation, quantum computing, and a dash of cybersecurity. I'm all about building smart, secure systems and love fast-paced environments where curiosity, creativity, and precision collide. Innovation's not a buzzword to me.

WORK EXPERIENCE

Side Projects (January 2025 – Present)

- Chainsage – a **finetuned AI agent** that **run functions and queries the blockchain** and lets you **talk to the blockchain**.
- Steganography implementation – **be truly secure** about no one reading your messages.
- Material Science projects using **ML on a database of physical properties and chemical structures** of molecules.
- X/Twitter shitposting **automation** using **finetuned LLM** to talk like me.
- Fine tuning LLMs.
- More on my portfolio ([link above](#))

Quant Trader (July 2024 – Dec 2024)

- Developed a **5-strategy trading system** for various risk profiles and timeframes.
- Completely **automated** trading.
- Achieved **80% accuracy and steady monthly returns**.
- Experimenting with **AI agents** for autonomous market analysis, forecasting, and trade execution.
- Leveraged tools like **Python, PLSQL, JavaScript, Oracle Cloud, MetaTrader, TradingView (Pine Script)**, etc.

Founder & CEO – XY and Z (Dec 2022 – June 2024)

- Developed an end-to-end **Hospital Management System** (web platform + IoT integration).
- Conducted **international market analysis**, identifying opportunities in healthcare sectors across continents.
- Wore multiple hats from **engineering** to **C-level leadership** during the bootstrapped phase of the company.

Freelance Engineer (July 2018 – May 2022)

- Delivered **10+ R&D projects** in fields like robotics, mental health, energy, and nanotech.
- Built web/mobile apps, ML models, robots, and IoT systems, tackling complex, interdisciplinary problems.
- Gained **hands-on Web3 experience**, from crypto development to identifying scams in early-stage projects.
- Automated workflows, cutting **30% of development time** through internal tools and processes.

Cybersecurity Intern (**NDA-covered**) (Apr – June 2018)

- Monitored data across organizations to identify anomalies in wireless communication and transactions.
- Built tools for **penetration testing** and **network security**, focusing on system vulnerabilities.
- Researched **sociotechnical impacts** of security technologies and their exposure within societal contexts.

EDUCATION

- Dropped out of Computer Science Engineering from Rajasthan Technical University. College is slow, expensive and they made me code on paper and pen.

TECHNICAL SKILLS

First and foremost, I'm a fast learner comfortable with new technology that I haven't used. Besides that:

- **Development:** HTML, CSS, JS, Python, SQL, PLSQL, Oracle Cloud, APEX, Netlify, Flutter, etc.
- **Data and ML:** Jupyter, Python, NLTK, Pytorch, SkLearn, Keras, MATLAB, Kaggle, Tensorflow, etc.
- **Tools:** Office suites, Media manipulation tools (GIMP, Adobe, etc.) tradingview, ChatGPT, n8n, etc.

EXTRACURRICULAR ACTIVITIES

- Casual Mixed Martial Arts fighter
- Motorcycle enthusiast (Modding and Riding)
- Gaming and modding
- Published Poet
